EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The Application has been amended as follows:

In the Specification:

Page 32, line 22 has been amended as follows

-- A second inflatable article was produced, aged, and tested in accordance with the --

In the Claims:

Claim 1, line 8 has been amended as follows:

-- extruding a second multilayer film having an outer heat seal layer, a tie layer, and a gas --

Claim 15, line 1, has been amended as follows:

-- The process according to Claim 14, wherein the second multilayer film has [an] --

Claim 27, line 2, has been amended as follows:

-- die and is folded over --

Allowable Subject Matter

3. Claims 1-27 allowed. Extruding two multilayer films with applicant's claimed heat seal layer, tie layer, and gas barrier layer is well known as disclosed by the admitted prior art and Kannankeril et al. (EP 1338413 A1). While the prior only discloses that it is known to use a tie layer comprising of an anhydride modified polymer containing anhydride at a level of 141 ppm, Tabor et al. '541 discloses that an increase in anhydride levels would lead to increased adhesion between two layers. However, since applicant is the first to discover that an article inflated to 3 psi delaminates at high temperature, one of ordinary skill would not have been motivated to increase adhesion properties at the time the invention was made, since the current anhydride level of 141 ppm produced a product that perform well. Examiner is relying on applicant's arguments presented on pages 16-17 in the amendment filed on February 14, 2005 for application number 10/302,004.
